

# embracing MICROSERVICES IN THREE STEPS

**WE CAN TEACH YOUR ENTERPRISE TEAM TO INTEGRATE A MICROSERVICES PLATFORM IN THREE STEPS. AT ONE FLAT RATE, THIS INCREMENTAL APPROACH IS THE BEST WAY TO LEVERAGE THE BENEFITS OF MICROSERVICES.**

## One: Free Presentation

A **free** one-hour presentation for your development team in a collaborative lecture setting. This presentation delves into the Microservices platform, assesses the pros and cons, and helps the audience to better understand if this architectural approach is a good fit for current or future development needs.

## Two: Online Course

Your enterprise team will attend four structured online Lab/Lecture sessions conducted through Google Hangouts or WebEx. In this eight-hour course, a reference Microservices implementation is coded, analyzed, and modified, including all source code. Full course breakdown available at [keyholesoftware.com/microservices-course](http://keyholesoftware.com/microservices-course).

Through this course, your team will learn how monolithic applications can be migrated to a Microservices platform, as well as for new development initiatives.

## Three: Custom Consulting

A Keyhole Sr. Consultant Architect will work with your team to help implement or migrate your existing applications to a Microservices-style platform. The flat rate of Microservices in Three Steps includes 40 hours of custom consulting.

By Step Three, your team has an understanding of the benefits Microservices can bring, and can work hands-on with Keyhole members to achieve them.
